

Our team has decades of experience making precision components, specializing in parts for engines and motors. Whether it's made on a mill or lathe, our team turns out amazing quality in short order.

Over the last 27 years we've perfected the machining of fan components. We know what works, and we're confident we can help you make the correct choice for your application. We are a one-stop shop in air movement, from the engine forward.

In addition to engine and fan components, we're a quality job shop with CAD/CAM specialists. We've found business in the bottling industry, made parts for custom hot rods, and we're always looking for a new challenge.

Breeza Industrial Machine Shop
